IMST proposes to promote forms of preparing adapted to a competing knowledge society, supposed to the integration process in the International and European Community. Its main mission is to form an engineer capable of adapting to the market economy requests and to the new technologies, to have economic and managing knowledge and to promote the durable development principles and also to protect the environment. For this he must be formed after the modern principle of direct participation when choosing its formative trajectory, to be included in a learning process that will assure him real chances at the free labour market competition.

The IMST Department offers good conditions for the professional and scientific preparing due to the high quality teaching staff, the curricula and studying programmes aligned to the european higher education requests and the laboratories endowed with high technology equipment.
